

LeNMS

Web-based network management suite.

- An all-in-one executable file without installation.
- Web-based graphical user interface based on HTML5 without the need for a plug-in.
- Maximized productivity with Leonton's industrial Ethernet solutions.
- The hierarchical architecture enables scaling up to 1024 nodes.
- Automatic network discovery and topology visualization.
- Auto-polling and refreshing for a large networking environment.
- Power consumption shown from a managed PoE device.
- Device configuration shown visually.
- Inventory information – showcases a device list with logs and topology images.
- Monitor events in real-time with an alarm.
- Notifications are sent out via email.
- Customize device icons.
- Network device planning software on the E-Map and Google Map feature.

Introduction

LeNMS is a web-based network management suite, allowing administrators to remotely monitor and manage connected devices on a local network. LeNMS is designed with SNMP and ICMP communication protocols to manage select Leonton Ethernet devices. The software includes the following categories: Topology View, Device List, E-Map View, Google Map View, and Maintenance. These category features help maximize productivity and organization when combined with Leonton's industrial Ethernet devices. Ultimately, this network management suite intends to reduce the time, money, and effort spent on traditional management without backend software.

Topology View

EXPANDED COLLAPSE

LeNMS automatically creates a network topology diagram. A device configuration does not require set up; the only step required is to configure the IP range in the network domain. LeNMS can discover the networked devices and automatically connect, monitor, and maintain from one central location. In the Topology View, LeNMS displays the topology of connections among all the switches and offers dynamic connectivity indicators, such as Port number, PoE power consumption, and Events.

Rows per page: 10 31-40 of 99

On the Device List page, several columns show the device's information online status, PoE usage, and more. Alternative device names can be given as well in order to organize the devices for easier management. Devices can be located quickly by using the sort or search feature. To manage devices with web interfaces simply click on the IP address which will be hyperlinked to the GUI web interface.

E-Map View

The screenshot displays the E-Map View interface. It features a sidebar on the left with navigation options: Topology View, Device List, E-map View (selected), Google-Map View, Maintenance, and Logout. The main area shows a detailed floor plan of a building with various rooms labeled (e.g., 101d, 102d, 103d, 104s RA, 105d, 107d, 109d, 111s, 114d, 115c, 117, 119, 120, 121, 122, 123, 127d, 129, 131, 133s, 135d RA, 137d, 140s, 140A PRIVATE, 142d, 141d, 143d). Several green location pins are placed on the map, some with question marks and numbers (e.g., 15, 10, 3, 9, 12). The interface includes a sidebar with navigation options: Topology View, Device List, E-map View (selected), Google-Map View, Maintenance, and Logout. The top header shows 'leonton LeNMS(Network Management Suite)' and 'License Status: Free Trial(2023-03-23) System Version: 1.0.8_23_12'. The top right corner has an 'Auto Logout 10 min' indicator.

The E-map View page allows floor plan images to be uploaded and devices can be positioned in locations where they are installed. This allows administrators to visually identify the location of a device quickly. If needed, the drawing on this page can be exported.

Google-Map View

The screenshot displays the Google-Map View interface. It features a sidebar on the left with navigation options: Topology View, Device List, E-map View, Google-Map View (selected), Maintenance, and Logout. The main area shows a Google Map of a city area with several green location pins placed on the map, some with question marks and numbers (e.g., 97, 89, 95, 98, 62, 90). The interface includes a sidebar with navigation options: Topology View, Device List, E-map View, Google-Map View (selected), Maintenance, and Logout. The top header shows 'leonton LeNMS(Network Management Suite)' and 'License Status: Free Trial(2023-03-23) System Version: 1.0.8_23_12'. The top right corner has an 'Auto Logout 10 min' indicator.

On the Google-Map View page, users can add a location of a device onto the map where the longitude and latitude will automatically be set. Similar to the E-Map View, this allows administrators to monitor the complete picture of a large region. This feature is ideal for managing medium to large scale application deployments.

Administrators will be informed if any abnormal events occur via email. Users can remotely fix issues allowing for networks to return to normal in a short amount of time. LeNMS provides a list of icons for different types of devices, as well as the option for uploading specific icons. This allows users to simply designate a certain icon to a particular device making for a more personal experience.

System Requirements

Minimum Requirements

CPU	Intel i5 2GHZ and above
RAM	8GB and above
Storage	1GB
Operating System	Windows 7 (64-Bit), Windows 10 (64-Bit)
Browser	Chrome v84 or newer
Other	WinPcap v4.1.3 (packet capture library for Windows system)

Order Information:

Minimum System Requirements

Trial Version	For a 1-year free trial with 100 nodes.
Enterprise Version:	No time limited with up to 1024 nodes.
